

## Where we operate

### RENEWABLES

Our four major renewables projects, one of which is currently under construction, have all been fabricated for the North Sea. While Lamprell is actively targeting the growing renewables industry in its traditional European markets, we are also placing a larger focus on new geographies, including the USA, which continues to gain traction.

### OIL & GAS

Our addressable oil & gas markets are predominantly in the Middle East, the region with the lowest hydrocarbon lifting costs globally. With our well-established presence in the UAE and our plans to move the centre of gravity for this business unit to Saudi Arabia, we are able to maximise our local content which is a key factor in the award of new projects in the region.
